## GyraJet LP

The GyraJet LP is a rotating hand-held tool that directs UHP water (up to 55,000 psi) for surface preparation, coating removal, industrial cleaning and hydrodemolition. The GyraJet LP uses a pneumatic drill motor to power manifold rotation. The compact design permits use in tight quarters while retaining complete control with comfortable hand grips.

### GyraJet and Tumble Box

A wide variety of manifolds are available to meet your cleaning needs. Attachments for the GyraJet LP range from a single-orifice pattern up to a 12-orifice pattern and are available in custom configurations and diameters.
